

## **Sarracenia**

(sar-uh-SEN-ee-uh)

Hardy to Zone 7 and higher for outdoors.

Full sun, grows 6-10" in container, minimum temperature 40°.

Maintain indoor temperatures above 40°. They can tolerate cool temperatures, but it is better to keep them above 60° if active growth is desired.

Preferably 50% or higher; however, they grow in water so humidity is usually not a concern.

They are bog plants and need to be kept moist at all times. It's best to grow them in a saucer of water. In addition, using non-chlorinated water will improve their growth.

Little or no fertilizer, as they prefer low fertility. Too much would harm them!

If pitchers die, cut them off.

They capture insects and are not bothered by them. For the most part, diseases do not bother them.

Keep them wet with pure, clean water for best growth.
